SUMMARY

Software engineer with experience building web applications, backend services, and AI products across the full stack. Most recently I was the sole engineer at an AI startup, where I built applications, infrastructure, and LLM integrations as the product changed direction. I also maintain daf-sdk, an open source agentic harness published on npm, and use AI coding agents such as Claude Code and Cursor in my daily development. Previously at IBM Consulting, where I built internal tools and later tutored the DevOps Bootcamp. Based in Colombia, available for remote work and open to relocation.

EDUCATION

National University of Colombia — Bogotá, Colombia
Bachelor of Engineering, Computer and Systems Engineering — Aug 2019 – Mar 2025
Relevant coursework: Software Architecture, Introduction to Intelligent Systems, Project Management

EXPERIENCE

Prism (formerly Karla) — Remote
Software Engineer — Feb 2025 – Oct 2026

- Sole engineer at an AI startup. Built the frontend, backend, infrastructure, and LLM integrations as the product moved from an AI editor for newspapers to a workflow automation platform.
- Built **Prism**, a workflow builder for AI automations, with drag and drop editing, real time streaming of runs, loops, and conditional steps.
- Built and published **daf-sdk**, an open source agentic harness in TypeScript, published on npm: a protocol layer validated with Zod, an execution engine, a pluggable storage adapter, and a large catalog of built in actions. It supports multiple LLM providers and runs in production in Prism and Glass.
- Built and deployed Prism and six other web apps: Glass, a chat app that shows each step of a run as it happens; WhoIsRaising.com, fund intelligence for investors; Hive, an AI answer engine with a community feedback loop; VCGigs, a job board for VC and startup roles; FundCFO.ai, a tool that helps fund finance teams catch errors across their documents; and Newsrun, a newsletter builder that turns chosen topics and sources into tailored daily briefings.
- Designed REST APIs with Fastify and Node.js, containerized the backend with Docker, and deployed to Vercel and Railway, including environments, secrets, and databases (PostgreSQL, MongoDB).
- Stack: TypeScript, Next.js, React, Fastify, Prisma, PostgreSQL, MongoDB, Docker, Vercel, Railway, Clerk, Stripe.

WhoIsRaising.com — Remote
Software Engineer (Part time) — Mar 2026 – Oct 2026

- Maintained and added features to a live platform that connects investors with funds raising capital, across the full stack, alongside my main role.

IBM Consulting (Blue Journey Internship Program) — Bogotá, Colombia
Application Developer Intern — Jan 2024 – Jan 2025

- Built **Publisher**, IBM Consulting's browser based CMS and drag and drop web builder (Angular, Material, Node.js, MongoDB), with component editing, page management, live preview, and multipage navigation.
- Led a subteam building the cloud publishing pipeline: Docker image generation from sites created by users, Netlify deploys, and deploy tracking in MongoDB.
- Supported Banco Caja Social's website and mobile apps (Angular, Android with Java, Backbase, OracleDB, JMeter) and built two automation solutions on watsonx with React, Node.js, Carbon, and IBM Cloud.
- Presented the MVP to IBM's Hybrid Cloud Management director and received a recommendation to present it to additional internal stakeholders.
- Completed IBM's DevOps Bootcamp (Docker, Kubernetes, Linux, Git, OpenShift, CI/CD with Azure), then tutored the next intern cohort on CI/CD, containers, cloud, and deployments while also attending its second edition.

PROJECTS

Platform Lab (personal project) — 2026

- Service built to practice platform engineering: a Fastify API on PostgreSQL with a worker that processes a job queue, where row locking lets several workers share the queue without duplicates. Packaged in a multistage Docker image that runs as a non root user, run locally with Docker Compose, shipped by a GitHub Actions pipeline that tests every pull request and publishes versioned images to GitHub's container registry, and deployed to AWS with Terraform (private RDS database, server, IAM roles, security groups), with remote state in S3 and a plan that runs on every pull request through GitHub OIDC, so no AWS keys are stored. The same service runs on Kubernetes through a Helm chart that CI installs, upgrades and rolls back on a throwaway cluster, with autoscaling and Prometheus and Grafana monitoring of its own request metrics.

Cultural Events AI Chatbot 2024

- Event recommendation system for Bogotá using LangChain, Selenium, and FAISS, with a fine tuned LLaMA-7B model and a Gradio interface deployed on Hugging Face Spaces.

UN-CampusConnect 2024

- Social network for the university community on a microservices architecture (Ruby on Rails, React Native, PostgreSQL, GraphQL, Docker, Google Cloud), built with Scrum.

SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Java

Frontend: React, Next.js, React Native, Angular, Tailwind CSS

Backend and data: Node.js, Fastify, Express, Spring Boot, REST APIs, GraphQL, Prisma, Zod, PostgreSQL, MongoDB

Infrastructure: Docker, Kubernetes, Helm, Terraform, GitHub Actions, CI/CD, Prometheus, Grafana, AWS, Google Cloud, IBM Cloud, Vercel, Railway, Netlify, Linux, Git.

AI: AI coding agents (Claude Code, Cursor), agentic harness design, Anthropic, OpenAI, and Gemini APIs, Vercel AI SDK, LangChain, FAISS, tool calling, streaming, structured output

Integrations: Clerk, Stripe, Notion API, Google Sheets API, Gmail API

Certifications and courses: Azure DevOps, DevSecOps Essentials, Jenkins CI/CD, Kubernetes, Red Hat OpenShift, Linux Fundamentals, AWS Cloud Practitioner Essentials, watsonx Essentials, Generative AI, Microservices, Agile

Spoken languages: Spanish (native), English (advanced), German (basic)
